#### **❖ WOMEN’S DAY CELEBRATION**

**International Women’s Day** is a global day celebrating the social, economic, cultural and political achievement of Women. This year’s theme for the International Day, '**Embrace Equity**'. The theme focuses on a gender-equal world that is free from bias, stereotypes and discrimination. A world that leads to a diverse, equitable and inclusive nature. A society where difference is valued and celebrated. Therefore, together we can work for women’s equality. International Women’s Day was celebrated at Vidya Academy of Science & Technology Technical Campus on behalf of Staff Welfare Committee on **8<sup>th</sup> march 2023 at 1.30 pm at Civil Seminar Hall**. At the beginning of the program, **Dr Jayanth L S (HOD Dept of AS)** render a short speech on Women’s Day and she addresses all the participants to the program. The first event was an inspirational talk by **Ms. Anitha Vijayan (Trustee Co ordinator)** and after that some cultural activities were conducted from faculties side. Following that some fun events were designed and of course to have fun for all. At the end of the event, a prize distribution ceremony for the winners in the programme was conducted.

## Effective Vehicular Communication by using Cluster and Certificate Revocation Scheme

BRIJILAL RUBAN,  
Associate Professor and Head,  
Department of Computer Science and Engineering  
Vidya Academy of Science and Technology Technical Campus  
Kilimanoor, Trivandum, Kerala, India

### Abstract:

Transportation safety, one of the main driving forces of the development of vehicular communication (VC) systems, relies on high-rate safety messaging (beaconing). At the same time, there is consensus among authorities, industry, and academia on the need to secure VC systems. The technology behind Vehicular Ad-hoc Network (VANET) is that vehicles are grouped into clusters and the transmission of data occurs from source to the destination node. Attackers forces VANETs to transmit malicious data in between different vehicles that prompts to difficult issues. At the time of transmission it estimates just for the trust value of nodes, it neglects to validate the trustworthiness of the transferred data. Henceforth falsely infused data or as malicious messages might be transmitted over the system. It may increase the storage overhead and also leads to interaction overhead due to update of information about revoked nodes. The elimination of attacked node (vehicle) from the cluster group may lose its certificate

- ❖ **Dr.Jayanthi L.S(Asso.Prof & HoD)** participated in IP Awareness /Training Program under **National Intellectual Property Awareness Mission on March 30, 2023**
